1,973	128,414	10.33

# Method~I

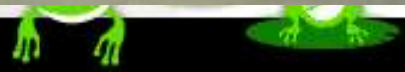

Since 2007 of June

120 healthy community volunteers

28 patients with poor daily functional status

# Method~II

hand-made craft class

Play Chinese Chess

bakery class

Transportation service

activity class

physical therapy

# Result

- Questionnaires survey in 2009 from 28 families

100% wish their family to continue to stay in the daycare center for future care!!

87% satisfaction for the services

The families reported that the patients became more active in interaction with neighbors and family members.

# Conclusion

- Daycare center for poor functional geriatric patients in rural area can play an important role for reduce the health inequality.
- Healthy community volunteers joined to accompany the unhealthy patients proved to be a good way for both geriatric people.

Thank you for your

attention!!
